

Figure 24. IRB97N sampling area (southwest sub-study area -- Figure 23). Sediment samples collected along transect T1 were ~ 24 m apart; along T2, ~30 m apart; and along T3, ~20 m apart. Note: in T1, only ten samples were collected. There was no sample #05. In T2, the DGPS fix was taken at sample #09 instead of at the end point (#11).
